

A Comprehensive and Versatile Bluetooth -
Wifi Travel Time System

Introduction and Company Profiles

- Transnomis is Canada-Toronto-based and employs a team of system architect, software developers, QA testers and UI/UX developer
- Clients in Canada and USA
- Recently awarded Edmonton Advance Traffic Management System project
- All hardware and software are developed, tested and manufactured in North America
- Long history of working on Intelligent Transport Systems solutions especially travel time systems.

Hardware Overview

Transnomis Bluetooth Sensor

- Our primary design principles: *Simplicity, Interoperability & Affordability*
- Ministry of Transport MTO approved
- Available in Shelf Mount and in Pole Mount (IP65 waterproof)
- Small and compact
- CSA and UL approved power supply
 - Wide input range (9-36VDC, 120VAC)
 - Protection: Shorting, Over-voltage, Over-temp
- Single Power Over Ethernet (PoE) connection
- Built-in cellular communication (option)

Ministry of Transportation Approved

- Extensively tested for 12 month, 4 season period on MTO Highway 26 test bed
- Eligible for bidding future MTO Bluetooth acquisition tenders
- Sensor and Software validated as meeting industry best practices by 3rd Party consultant.

SPECIFICATIONS

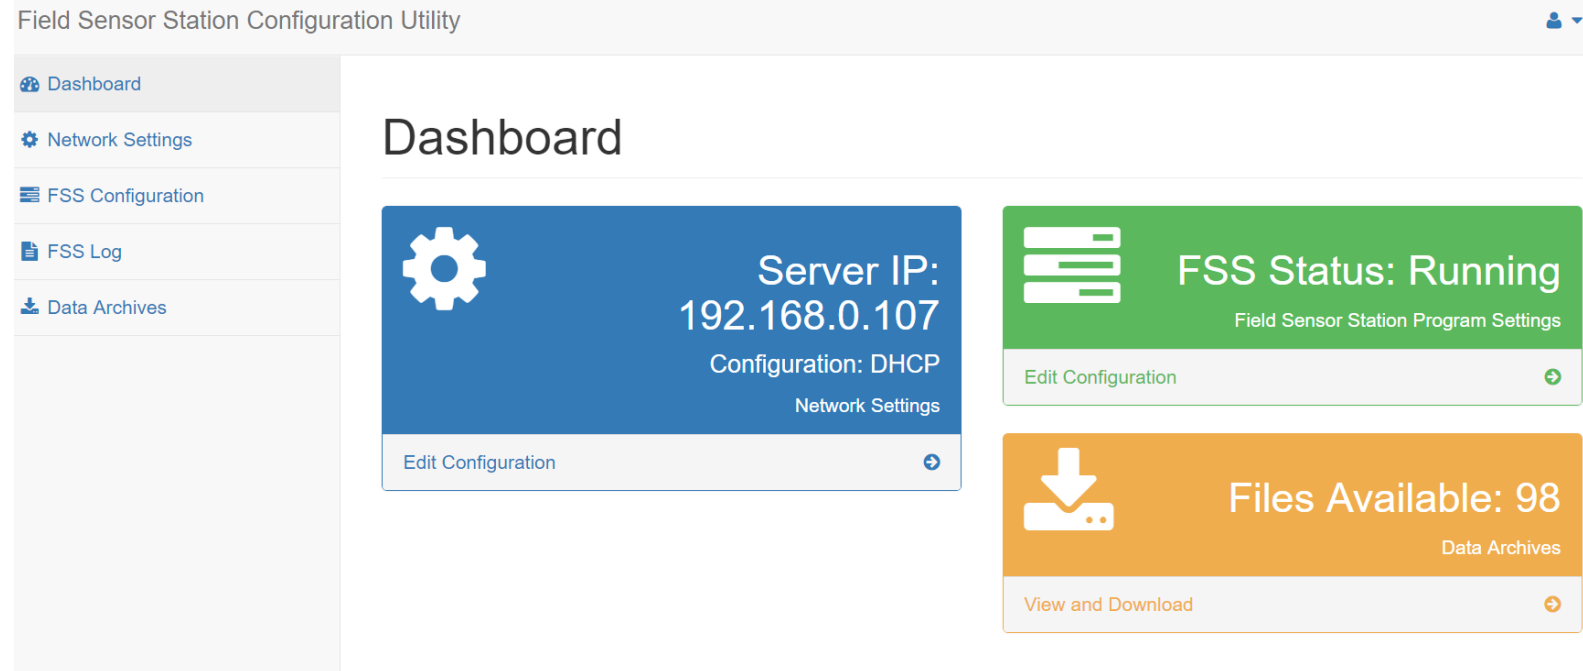

Processor	1.2GHz 64-Bit QUAD Core
Measured Item	Bluetooth and WiFi MAC addresses
Timestamp	To nearest milisecond
Memory	1GB DDR-RAM
I/O	High-Speed MicroSD slot (up to 30Mb/s) 10/100 Ethernet Port
Power Consumption	3W Nominal 6W Max
Input Voltage	PoE (9-36VDC or 802.3at/af with adapter)
Antenna	Omni Directional
Detection Area	Up to 200m
Dimensions	Shelf mount: 6" x 3" x 6" Pole mount: 9" x 12" x 2" (L x W x H)
Weight	Shelf mount: 3lbs Pole mount: 5lbs

Major Hardware & Firmware Features

- Supports multiple detection methods simultaneously
 - Bluetooth discovery
 - Bluetooth Low Energy discovery
 - Bluetooth Low Address Portion (LAP) sniffing
 - WiFi discovery
- Multi-threaded
 - Simultaneous detection of all 4 types
- Asynchronously hashed and timestamped to 16 digits accuracy immediately
- TLS/SSL Encryption for GUI and Data
- Immediate or batch data delivery option
 - Immediate – fastest
 - Batch delivery with compression to lower cell data cost
- Measures device dwell time
- Provides persistence device counts

Easy Configuration

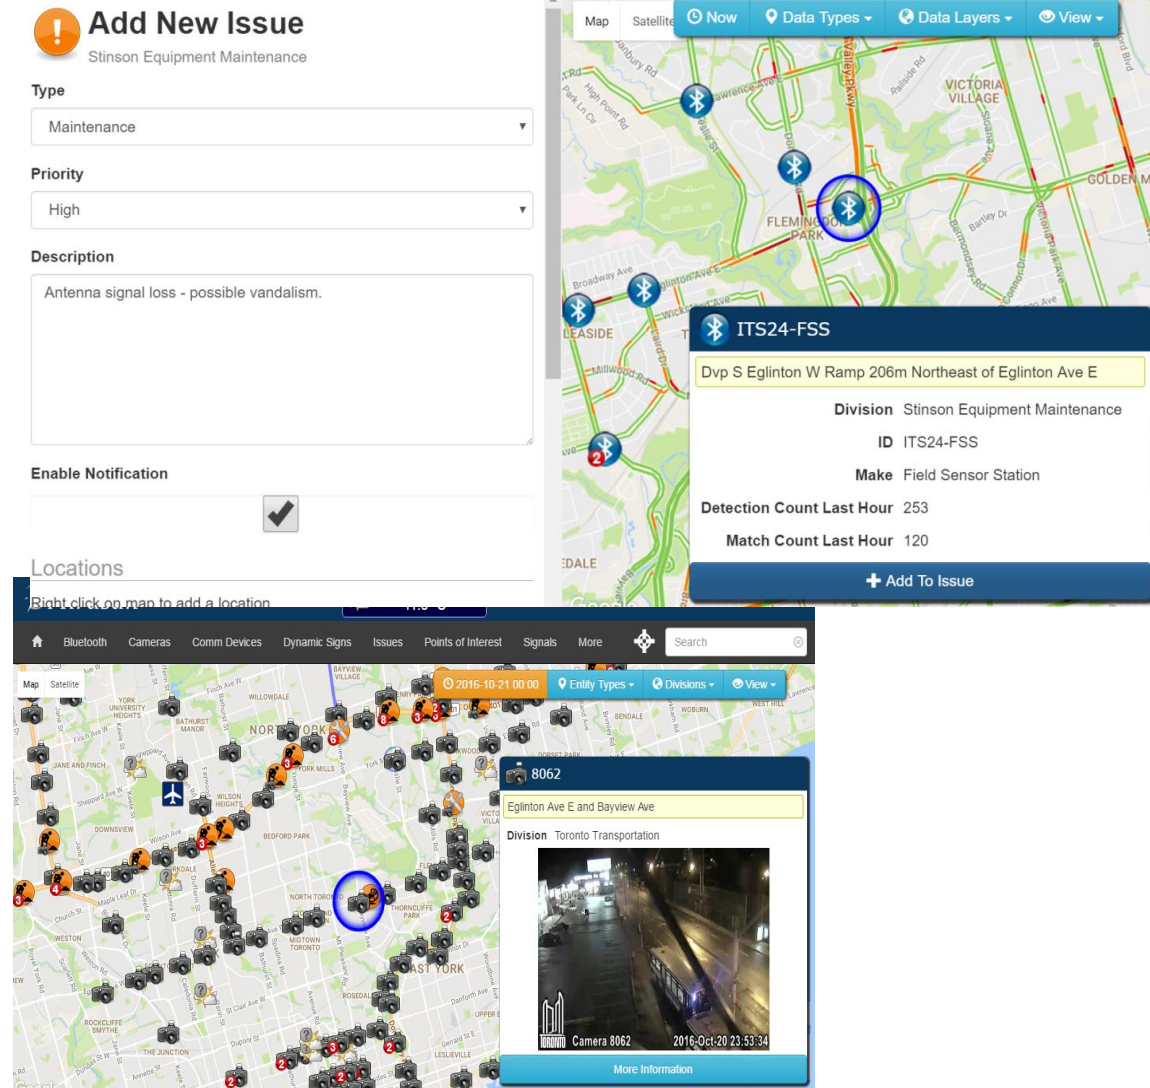

- Web based configuration (any browser, any device)
 - IP address (static / DHCP)
 - Subnet mask
 - Gateway
 - MAC Hashing – enable/disable, salt
- Default configs come pre-loaded
- Automatically resumes operation
- Automatically sync time via NTP on start up and daily
- Download data archived / backed up automatically
- Firmware upgrade up-to-date

The screenshot displays the 'Field Sensor Station Configuration Utility' web interface. On the left is a sidebar menu with options: Dashboard, Network Settings, FSS Configuration, FSS Log, and Data Archives. The main content area is titled 'Dashboard' and features two primary status cards. The first card, in blue, shows the 'Server IP: 192.168.0.107' and 'Configuration: DHCP' under the 'Network Settings' section, with an 'Edit Configuration' button. The second card, in green, shows 'FSS Status: Running' for 'Field Sensor Station Program Settings', also with an 'Edit Configuration' button. Below these, an orange card indicates 'Files Available: 98' for 'Data Archives' with a 'View and Download' button. The interface is clean and modern, using a color-coded system to distinguish between different functional areas.

TTMS Overview

- Web and map based GUI
- Built-in GIS engine – no link-by-link config
- Map-based route config
- User-customizable dashboard
- Equipment issue management and report
- Flexible data analysis tool
- Advanced OD report
- Supports both Canadian and US units
- Supports other BT systems and other data types (e.g., camera, RWIS, traffic event...)

Add New Issue
Stinson Equipment Maintenance

Type: Maintenance

Priority: High

Description: Antenna signal loss - possible vandalism.

Enable Notification: ☒

Locations: Right click on map to add a location

ITS24-FSS
Dvp S Eglinton W Ramp 206m Northeast of Eglinton Ave E

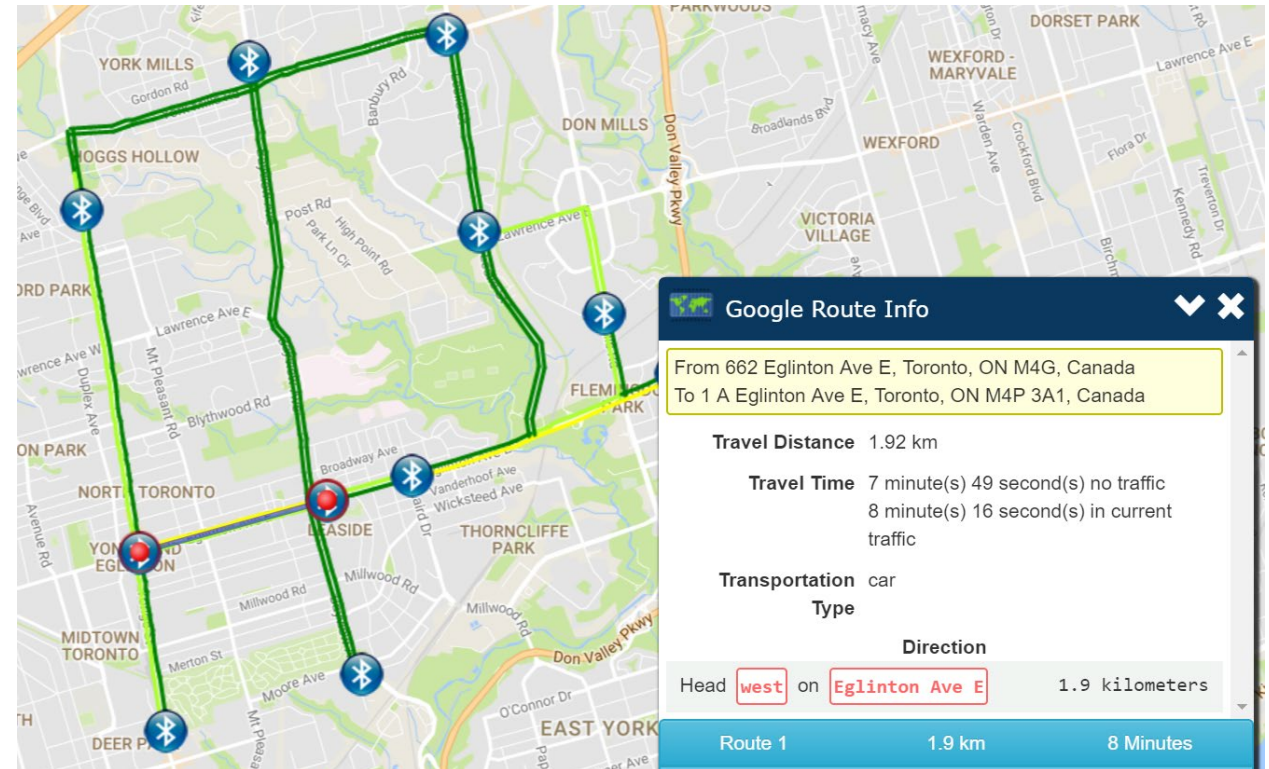

Division: Stinson Equipment Maintenance
ID: ITS24-FSS
Make: Field Sensor Station
Detection Count Last Hour: 253
Match Count Last Hour: 120

8062
Eglinton Ave E and Bayview Ave
Division: Toronto Transportation

Camera 8062 2016-Oct-20 23:53:34

Map Based Graphical User Interface

- Web based: any browser, any device
- Automatic colour coded speed indicators
 - No manual drawing
 - No configuration of detector pairs
- Issue notification built into device icon for easy identification
- Historical data viewing. Dial back the clock to see congestion at any point in the past
- Robust search feature to quickly identify a device or issue
- Quickly compare system travel time with Google in real-time

Travel Time – Other Supported Sources

- Google (has cost)
- Waze
- TomTom
- Bus / fleet vehicle GPS
- GPS from mobile app users
- Loops
- Radars

Custom Data Analysis

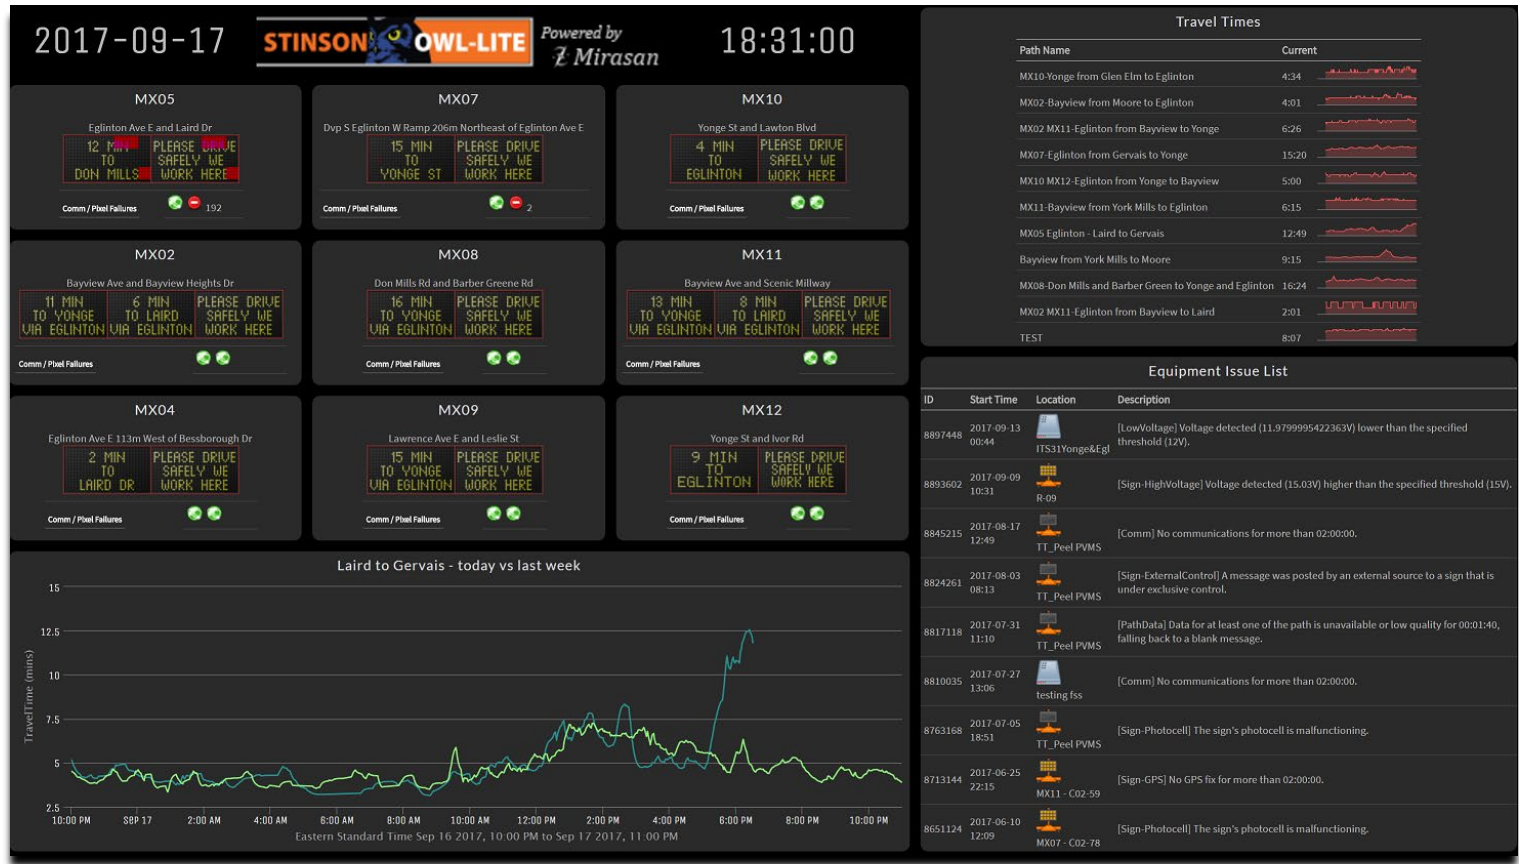

- Compare multiple data sets simultaneously
- Historical data easily overlaid for pattern and issue analysis for any given day or time period
- Easily expand or contract your time spans with the wheel of the mouse for macro or micro analysis
- Export the datasets at anytime in an easy to use CSV file

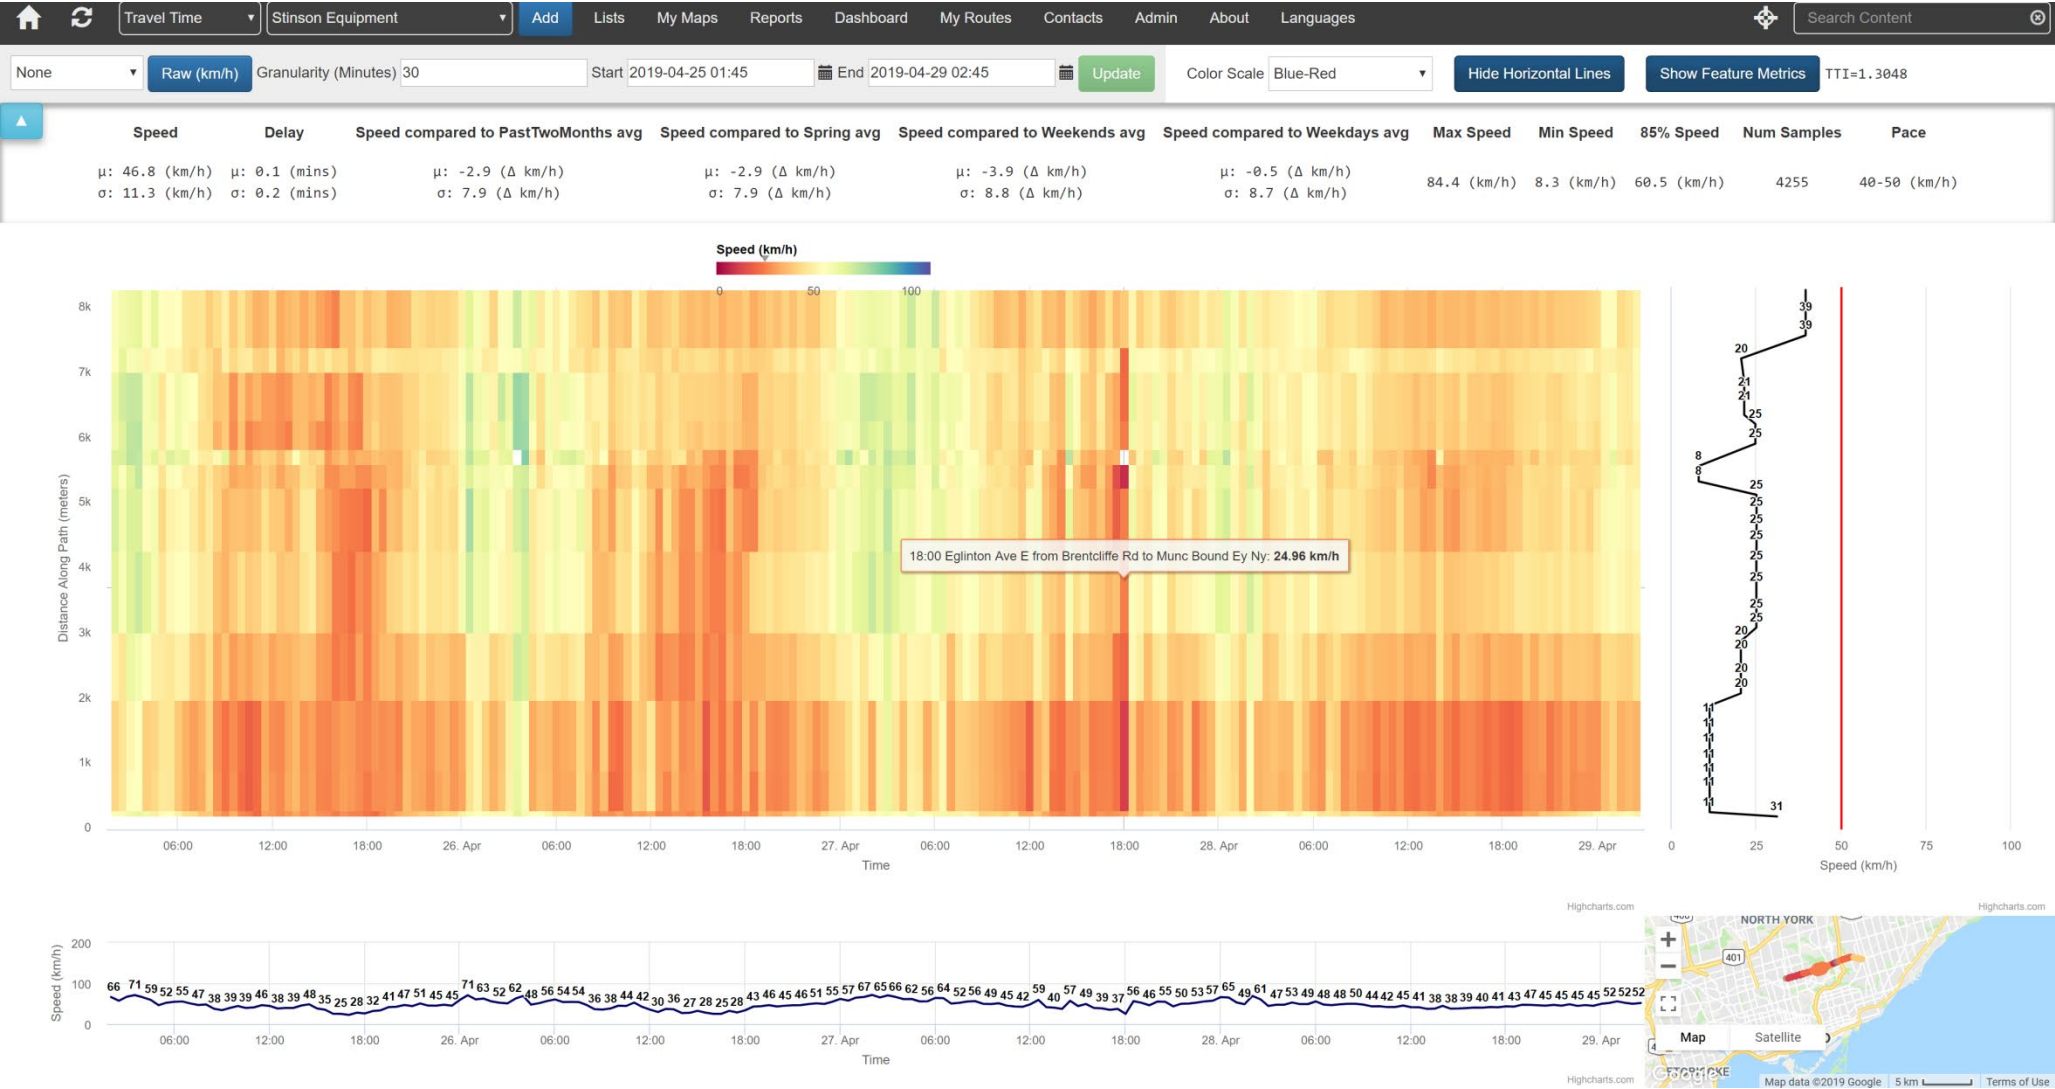

Activate Windows
Go to Settings to activate Windows.

Maintenance or Fully Customizable Dashboard

- Fully customizable
- Aggregate multiple data sets for easy analysis
- Allows operators to monitor major conditions at a glance
- Ground truthing video and other sources allow for quick validation of reported issues

Advanced Heatmap Analysis + TTI

Maintenance Management

- An issue is anything that may require the users attention
- Loss of communications, low voltage, low volume/speeds, above average congestion etc all can trigger an issue alert
- Email alerts to any number of users possible for various sets of issue reporting
- Alerts can be sent M2M to any other software systems as well such as Emergency Services Dispatch and maintenance crew dispatching systems
- Maintenance crews and users can manually add an issue to a device for tracking purposes. Things like regular maintenance checks, firmware upgrades, battery/hardware changes. Great tool for tracking maintenance activities
